

INVITATION

Water-Saving Plumbing Devices by U.S. WaterSense Program

As one of the most accepted Water-Saving programs, the WaterSense® mark and its certified products have been widely used in the United States marketplace.

WaterSense is a program developed and promoted by the U.S. Environmental Protection Agency (EPA), with the purpose to preserve water sources through the use of high-efficiency water consuming plumbing products, while maintaining the performance of these devices.

As an EPA-recognized certification agency, IAPMO R&T has listed thousands of products for WaterSense certification since the beginning of the WaterSense program. Now, in order to further promote the important role that plumbing products can play to reach the ultimate goal of water preservation, as well as to bring awareness to manufacturers of certified WaterSense products with regard to the new changes recently introduced in the WaterSense program, IAPMO's Beijing Office invites you to attend a seminar during the 17th Kitchen and Bath China Exhibition. Ms. Stephanie Tanner of the EPA will speak for the WaterSense program and provide updates.

Please see the following for the details:

1. Organized by:
 - U.S. Environmental Protection Agency
 - IAPMO Beijing Office
2. Sponsored by:
 - China Building Ceramic Sanitary Ware Association
 - China National Hardware Association
3. Seminar Schedule:
4. May 24, 2012, 1:30-4 p.m.
5. Seminar Agenda:
 - a. U.S. EPA WaterSense Program and its new changes.
 - b. Introduction of water-efficiency plumbing products.
 - c. WaterSense certification process.
6. Speaker:

Ms. Stephanie Tanner
U.S. Environmental Protection Agency.

For participation, please contact IAPMO Beijing Office or the sponsoring organizations.
